This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE.

The following list of names of parts of the body and diseases was collected in Galway and Mayo. For the most part all the words have been taken down from the spoken language and on this account the list is far from complete

In all languages the greater part of the names used in anatomy, medicine, &c., are new words coined from the classical languages, and in any scientific work in Irish this should also occur, but in the list which follows I have used only pure Gaelic words and have not used adopted words, and give, as far as possible, the most generally understood meaning for each word or expression ; as necessarily the folk names of unscientific people cannot be exact, often a person, using a word for the name of a disease, say, may include more than one disease in the one name.

To save lengthening the list unnecessarily I only give the name of a region of the body and not the parts composing it, as lurga, the shin. The shinbone (cnáiṁ lurgan) is not given as it can be formed as in other languages.

A peculiarity of Irish must be noted here ; that is the idiomatic use of leaṫ to denote one organ, limb or part of the body, which is bilateral or one of a pair, as leaṫ-ṡúil means one eye not half-eye, and sometimes I have heard the expression mo ḋá leaṫtaoiḃ.

An Mangaire Súgaċ.

[It is not correct to say that all the words in the list of "obsolete" words are no longer known. Many of them are quite usual in the Irish-speaking districts still, *e.g.*, riṫ fola, ruainne, uirliocan, &c Words known not to be obsolete are marked *a*.]

ADDITIONAL NOTE BY DR COSTELLO.

"I see Mr. Hayes gives "cloċar" a "wheezing in throat." We have here "cloċarnaċ an ḃáir" for "death rattle."

Cláiríneaċ he gives a cripple, here it is confined to a person (ofte a beggar), who has entirely lost the use of his lower limbs or in which limbs are absent and who progresses by means of his hands and who lower part rests on a dishlike board.

Laoiḋeán here is applied to the middle part of a potato left afte the 'slits' are taken off it for planting; the core left is Laoiḋeán.

A person going through a crisis in sickness such as fever, is said he to be going through a 'cool' when speaking English and ag dul fa faoṫaṁ in speaking Irish. I wonder is 'cool' the English word, 'coo meaning that the patient was getting cool; or is it 'cúl' from the sickne going *back?*

I got fuaċtán here for a spavin in horse.

I think we left out briċíneaċ, freckled; guirín, a pimple, briolaċár murrain in cattle.

Brillín here is the 'psalterium' one of the 'stomachs' of a ruminant, called also 'merry Phils' or 'book tripe.' I wonder has it connection with briolaċán, as murrain is believed to be caused by indigestible food clogging the stomach in this pouch and so causing obstruction of the bowels. This belief is not confined to ignorant people.

CLÁR.

[As a rule, only living words are indexed here, though no hard and fast rule has been drawn, for the simple reason that the marches between what is obsolete and what is not obsolete are not yet thoroughly defined in Irish, especially as regards terminology. Through its cultivation having been partially neglected, many words of the Irish vocabulary which should have remained in common use until to-day have been allowed to drop out of the spoken tongue. Words of this kind are marked *. Usage may revive these. Other doubtful words which, though not marked, are indexed, will very probably be found to be current in Irish-speaking districts.]
